

CAMATEL CANADA CORPORATION

Company Profile

CAMATEL Canada is a supplier of specialty telecommunication devices in North America. We help Telcos and ISPs to obtain reliable product, reduce the cost, add unique features and raise their images. Our customer-premises equipment (CPE) manufacturer, based in Shanghai, is the largest DSL CPE provider in China. The manufacturer has a professional R&D centre, advanced equipment, many of its own technical patents, production lines strictly implementing ISO9001:2000 standards and skilled employees. Therefore, we present to our customers high quality, cost effective CPEs

with excellent performance and a variety of features.

Growing Together

NetVito Series

ADSL CPE Features

- Multiple preconfigured PVC settings, popular in North America.
- With anti-lightning and power surge protection design.
- Their longer loop performance is able to reach up to 7.5 km, given quality ADSL wire installation.
- The built-in TR-069 feature allows the unit to be managed remotely from Telcos.
- Excellent interoperability with most popular DSLAMs.
- Circuit boards are lead-free with RoHS-compliant
- Ergonomics consideration in industrial design, and feature details

NV4200

ADSL 2+ 1-Port Modem

Compact enough to fit one's palm, the NetVito4200 is an ADSL2+ Ethernet modem for residential and commercial purposes. It has a transparent bridging version of firmware for Telcos.

NV5200

ADSL 2+ 1-Port Router

Designed for residential and SOHO purposes. Its advanced technologies make its size compact and cost competitive. The advanced features also allow users to implement multi applications behind NAT with security designs. Its MTU size is able to adjusted if required. The administrator of the ISP can remotely monitor and manage the CPE via the TR-069 feature. If SNMP is needed, there is supporting firmware available upon request.

NV5340

ADSL 2+ 4-Port Router

An enhanced ADSL2+ 4-port router with extension memory. It has strong management functions that support both TR-069 and SNMP. Its MTU size is adjustable to meet any MTU requirements from ISPs. With well designed VLAN/Port Mapping feature, it can support LAN isolations, VPN applications, video applications and triple play. Its built-in firewall will allow the unit and computers to work safely, while keeping out hacker attacks.

NV6240

ADSL 2+ Wireless 4-Port Gateway

It is designed for commercial and small business users. Its built-in Access Point (AP) supports 802.11b and 802.11g with transmission rate up to 54Mbps. The wireless security includes 64bit, 128bit, 256bit WEP, WPA, 802.1x certificate, user isolation, MAC address filter, hidden SSID and SSID list. Its MTU size adjustable, firewall protectable. Both models support VPN IPsec pass-through, TR-069 and/ or SNMP. The NetVito 6240 supports VLAN/Port Mapping as well.
